

## ePIPE<sup>®</sup> Provides Same Day Water on with Advanced 2 Hour Cure

### The Problem:

A local apartment complex was experiencing pinhole leaks in its piping system.

Property Owners face big decisions when leaks and corrosion exist in the piping systems of their rentals. Traditional repipe methods are destructive. Having water off 3 overnight would require the placement of tenants in a hotel or other facility in order to ensure running water.

### The Solution:

ePIPE Restoration with same day return to service.

The patented ePIPE process restores pipes "in-place" with far less destruction than a repipe. The owner was informed that ePIPE restoration could be performed on units to restore the piping system for all 93 units in the building in just one month using ePIPE's 2-hour return to service epoxy.

ePIPE certified technicians were able to restore the piping system, protect the pipes from future corrosion and leaks, and turn water back on for the tenants every night during the restoration.
